

Air probe NiCr-Ni, type K, green

The B+B air probe is a thermocouple type K, which has been integrated in a miniature plug DIN EN 50212. Due to the free-standing thermocouple a fast response time is warranted. The air probe can be connected directly to the designated measuring devices or data loggers for thermocouples type K with miniature plug. You therefore have the possibility to measure or rather record the ambient temperature at the desired spot.

Art.-no. 0629 1456

Features

- Shock and vibration resistant
- Long-term stability
- Ergonomic designed form
- Compact dimensions, low weight
- Low-priced

Application areas

- Industrial measurement instrumentation
- Production halls
- Laboratory equipment
- Heating and air conditioning
- Environment engineering, automotive industry
- Temperature monitoring e.g. in clean rooms, test rigs, etc.

For our air probe an extensive accessory program is available:

- Various digital thermometers
- Software for digital thermometer 8856 with RS232-interface
- Data loggers

Product range of the B+B Thermo-Technik GmbH:

Development and production of temperature and humidity probes

Temperature and humidity sensors

Temperature and humidity measuring systems

Pressure sensors and pressure transducers, modules
