Press release No. 6-2018

## We shall be at the Hanover Fair in 2018

For many years, the Hanover Fair has been the world's most important industrial and capital goods fair. With around 225,000 trade visitors in 2017, of whom 30% came from abroad, the fair gave rise to 5.6 million business contacts. The 6500 exhibitors presented technology for the production processes and energy of the future. 60% of the companies came from abroad; to be more exact from over 70 different countries. Over 500 trailblazing Industry 4.0 solutions attracted visitors from all over the world.

B+B Thermo-Technik GmbH took the decision to be part of this trade fair with its own exhibition stand in 2018. B+B is presenting both tried and tested products such as thermocouple connectors, temperature sensors, cable probes and infrared measurement technology as well as new developments: the new pressure transducer range and the kiro wireless product series.

The new B+B pressure transducers allow more connection variants and more compact, more durable and better performing housings than the previous ones. This makes the handling altogether much simpler for the user.

The kiro wireless product series is undergoing steady development, and customers can benefit from an ever increasing range of options. The kiro solo is a WLAN data logger that sends its measurement data via WiFi to a cloud application. The kiro multi is a wireless network that allows for data transfer over long distances to a gateway. From there they are forwarded to a cloud application for the user to view them in a prepared format. With kiro local, this product family has grown further with yet more innovation. The 2.4 GHz Low Energy technology of the 4th generation opens up a whole new spectrum of measurement technology possibilities.

All three systems are characterized by low energy consumption, and because no cables need to be laid they can also be installed with little effort.

B+B has always pursued the goal of providing customers and users with the best possible measurement solutions, whether off the shelf or developed according to specific customer requirements.

So visitors to the Hanover fair can expect not only a range of innovative measuring solutions and well thought through concepts, but also truly pioneering developments in the sector.

Find out more from B+B in Hall 11, Stand B75, of the Hanover Trade Fair from 23 April until 27 April 2018.
